

ANUSREE VIJAYAN

Backend Developer | Frontend Developer | Deployment Engineer
Batu Pahat, Johor, Malaysia | +601167409108 | anusreevjn0910@gmail.com | <https://av0910.my>

PROFESSIONAL SUMMARY

Software Engineering student and freelance full stack developer with hands-on experience building and deploying production web applications, REST backends, cross-platform mobile apps and machine learning dashboards for paying clients. Skilled in PHP, Laravel, Python, Flask, MySQL, Flutter and Firebase, with end-to-end ownership from requirements and database design to deployment and maintenance.

TECHNICAL SKILLS

Languages: PHP, Python, Java, JavaScript, Dart, C#, SQL, HTML, CSS

Backend: Laravel, Flask, REST API, PDO, Node.js, Session Authentication, OAuth 2.0, Role-Based Access Control

Frontend: React, Flutter, Responsive Web Design, Progressive Web Apps (PWA), Blazor, Streamlit

Databases: MySQL, Firebase Firestore, SQLite, Database Design, SQL Migrations

Cloud and Deployment: Hostinger, Netlify, Firebase, Cloudflare R2, Cloudinary, Git, GitHub, DNS Setup

APIs and Integrations: Google Calendar API, Gmail SMTP, Telegram Bot API, Google Apps Script, Groq API

Machine Learning: scikit-learn, Random Forest, SHAP, PCA, Pandas, PennyLane

Data and BI: Power BI, Excel

Practices: Agile, Requirements Engineering, Software Testing, UML, Version Control

EXPERIENCE

Founder and Full Stack Developer, 404 Web Services [11/2025] to Present

- Delivered 20+ web and mobile applications for students and SMEs using PHP, Laravel, Flask, Flutter and .NET.
- Built a three-role healthcare rehabilitation system in PHP 8 and MySQL with hashed authentication, PWA support, Cloudflare R2 video storage and Google Calendar sync, deployed to production on Hostinger.
- Developed a Flask machine learning platform predicting student dropout with about 98.9% accuracy, featuring SHAP explainability, Google OAuth, batch CSV processing and automated PDF reports.
- Shipped a bilingual Flutter marketplace app with Firebase Auth, Firestore and Cloudinary, validated first through a React prototype for client sign-off.
- Built and deployed PHP and MySQL systems including a clinic health records system (PKU Digital Care), a construction safety management system (SafeSitePro) and an e-learning portal with lecturer roles (KKJ E-Learning).
- Developed a voice phishing detection module (VishGuard), a Flutter mental health screening app (DoINeedHelp) and a .NET MAUI and Blazor social app (FriendsHub).
- Built Power BI dashboards from raw access control system exports and fixed production bugs on a university student portal.
- Automated invoicing and client intake with Google Apps Script and Telegram Bot API, reducing manual admin work.
- Managed full project lifecycle including requirements gathering, scope control, change requests, deployment and post-launch support.

PROJECTS

OncoScan: Quantum Autoencoder Brain MRI Anomaly Detection, Quant-A-Thon 2026 | Python, PennyLane, Streamlit 2026

- Built an anomaly detection pipeline trained only on healthy scans and evaluated on a 7,200-image MRI dataset.
- Benchmarked classical (AUC 0.895) against quantum (AUC 0.769) bottlenecks and reported results without overstating quantum advantage.
- Diagnosed failure of a patch-based prototype on real data and redesigned it around whole-image representation.

EDUCATION

Bachelor of Computer Science (Software Engineering) with Honours Expected [08/2028]

Universiti Tun Hussein Onn Malaysia (UTHM) | CGPA: 3.45 / 4.00

Relevant Coursework: Database Systems, Software Engineering Principles, Requirement Engineering, Software Testing, Computer Networking, .NET Programming, Visual Programming

ACHIEVEMENTS

- Dean's List, UTHM: Semester 1, Semester 2 and Semester 4
- Quant-A-Thon 2026 Hackathon participant, Team Quarters (QT-5 track)
